

New Partnership with Cetix, Rotherham, UK.

Cetix and Codra have agreed to work in close unison on projects to provide major installation solutions to UK Blue Chip companies, based upon Codra's flagship Panorama Suite products.

Cetix and Codra have formed an agreement to work closely together on major projects. Cetix will provide integration and installation services and Codra will provide design expertise, consultancy and product know-how.

This partnership is based upon a close working relationship from pre-sales through to long-term system and software maintenance.

Cetix and Codra have agreed to work closely together, where Codra provides specific training and consultancy services to Cetix in order to bring Codra's guarantee of best practice to designs of major SCADA installations for Blue Chip clients.

Under Codra's PCI program, Cetix will benefit from Codra's tailored training and consultancy services, such that Codra's consultants work directly embedded with Cetix's engineers in the areas of system architecture, cybersecurity, resilience, performance and efficiency, as well as SCADA functionality and any requirements to meet specific industry or operational standards. Thus ensuring a system design based upon best practice, with the assurance from the product manufacturer.

This close working relationship between the system provider, the product provider and the end user is a tried and tested approach that has worked well with EDF Energy, Drax Power, Network Rail; and through this new partnership with Cetix, Codra expands this 3-way approach within oil and gas industry.

A handwritten signature in blue ink, appearing to read "C. S. G.", positioned above the printed name.
